ABOUT PROJECT

BUSINESS VALUE

Intelly is a healthcare app that transforms patient care with telemedicine, prescription management, and real-time tracking. Doctors benefit from remote patient monitoring and improved effectiveness.

01

MAIN GOAL

Design a healthcare app featuring telemedicine capabilities for seamless doctor-patient interactions. Prioritize user-friendly interfaces, secure data transmission, and integration of essential medical records. Ensure compatibility across devices for efficient remote consultations, fostering a reliable and accessible healthcare experience.

BUSINESS VALUE

Establish sustainable revenue streams by implementing long-term payment models for telemedicine visits. Capitalize on the growing demand for digital healthcare by developing an innovative medicine.

03

We have analyzed the latest healthcare industry researches and came up with two user personas: patient and primary care specialist

"I love how the health tracking app keeps me connected with doctors through telemedicine. Monitoring my health remotely is a game-changer! It's like having a personal health assistant in my pocket. Such a relief!"

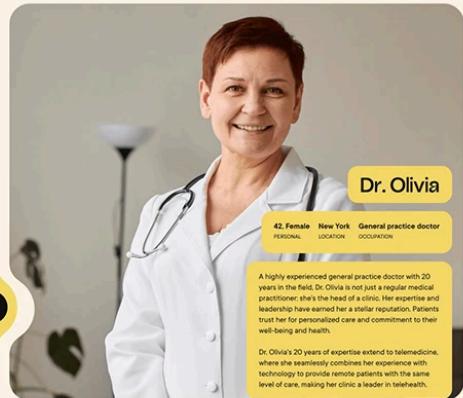

CHALLENGES

- Physical examination is challenging, this can affect diagnostic accuracy.
- Connectivity problems, glitches/lags in video calls, or patient unfamiliarity with technology can disrupt telemedicine sessions.
- Ensuring the privacy and security of patient data during virtual consultations is a constant concern.
- Telemedicine payments, regulations and licensing across different regions can be a extremely challenging.

WANTS

- User-friendly EHR system with an easy access to patient information, including medical histories, diagnoses, treatment plans. It should be able to retrieve patient records during consultations, help with billing and insurance claims.
- Access to ongoing medical education and training opportunities to stay updated with the latest medical advancements.
- A robust appointment scheduling system that helps organize a day effectively.
- Drug interaction alerts, dosage recommendations, and the ability to send electronic prescriptions.

"Telemedicine and health apps could offer vital features, enhancing accessibility and patient engagement. From virtual consultations to real-time monitoring, these technologies redefine healthcare, making it more personalized and convenient for everyone."

Record water intake, sleep, and stress levels seamlessly for a holistic well-being perspective. The user-friendly interface ensures easy daily input, encouraging consistent engagement. Gain personalized insights into your lifestyle, fostering informed and proactive health choices.

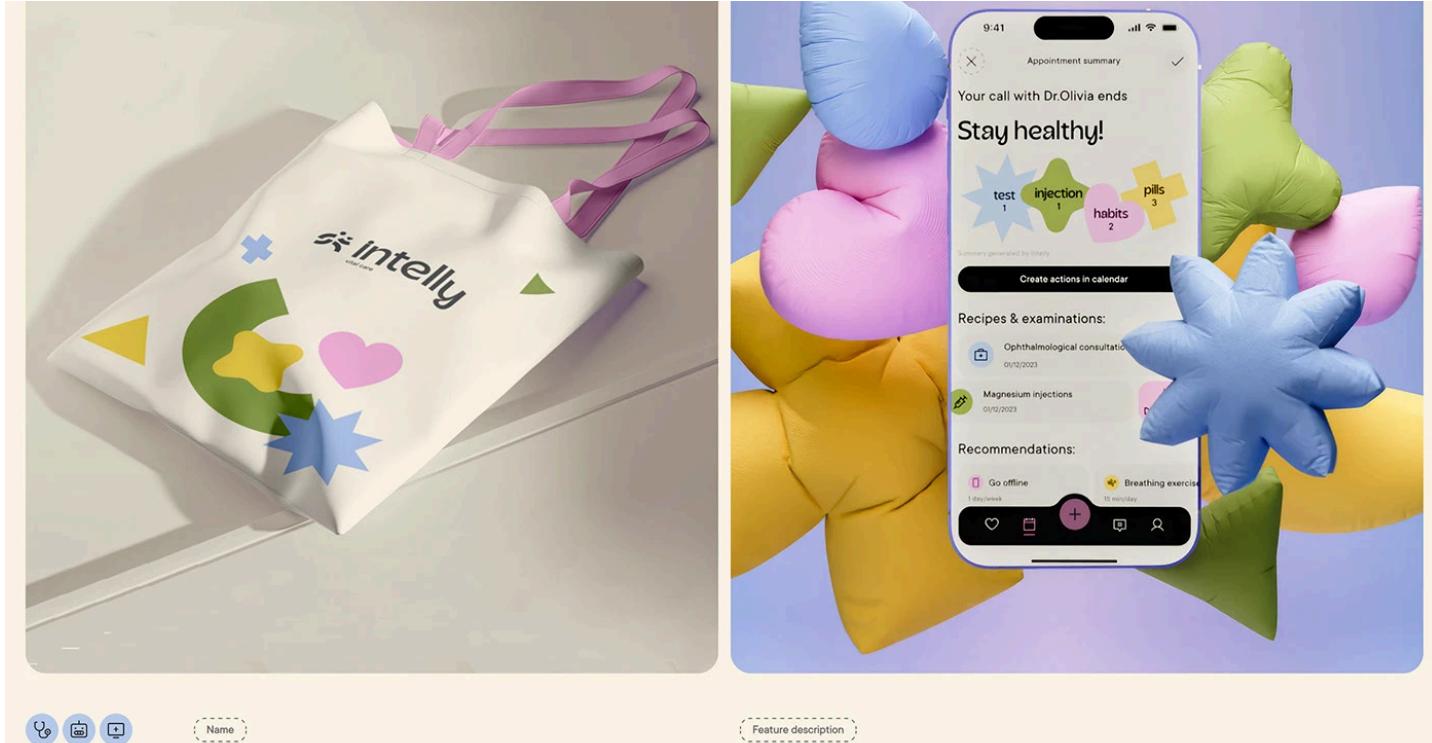

The image displays a grid of eight screenshots from the Intelly healthcare app, illustrating its various features:

- Top Row:**
 - Health Score:** Shows a daily health score of 8.8 with a breakdown of activities like water intake, pills, habits, heart rate, and mind.
 - Sleep Tracking:** Displays sleep quality at 76%, duration from 11:22 PM to 07:12 AM, and a summary of light and deep sleep.
 - Heart Analysis:** Shows heart rate at 123 bpm with a graph of heart rate over time.
- Bottom Row:**
 - Water Tracking:** Shows progress towards a goal of 15 glasses of water, with a reminder set for every 45 minutes.
 - Pill/Supplemental Reminders:** Allows users to add and manage supplement reminders, including details like dosage and consumption times.
 - Calendar View:** A weekly calendar for May 2024 showing scheduled activities like a clinical blood test and a healthy breakfast.

Monitoring of all health indicators.
AI Helper & Online doctor's appointment

Our platform enables comprehensive monitoring of vital signs, symptoms, and medical history. Using AI algorithms, it offers personalized health advice based on collected data and medical guidelines. Additionally, our telemedicine feature facilitates virtual consultations between patients and healthcare providers through real-time video conferencing and secure messaging. This ensures timely medical assistance and follow-up care, enhancing accessibility and convenience.

04.3

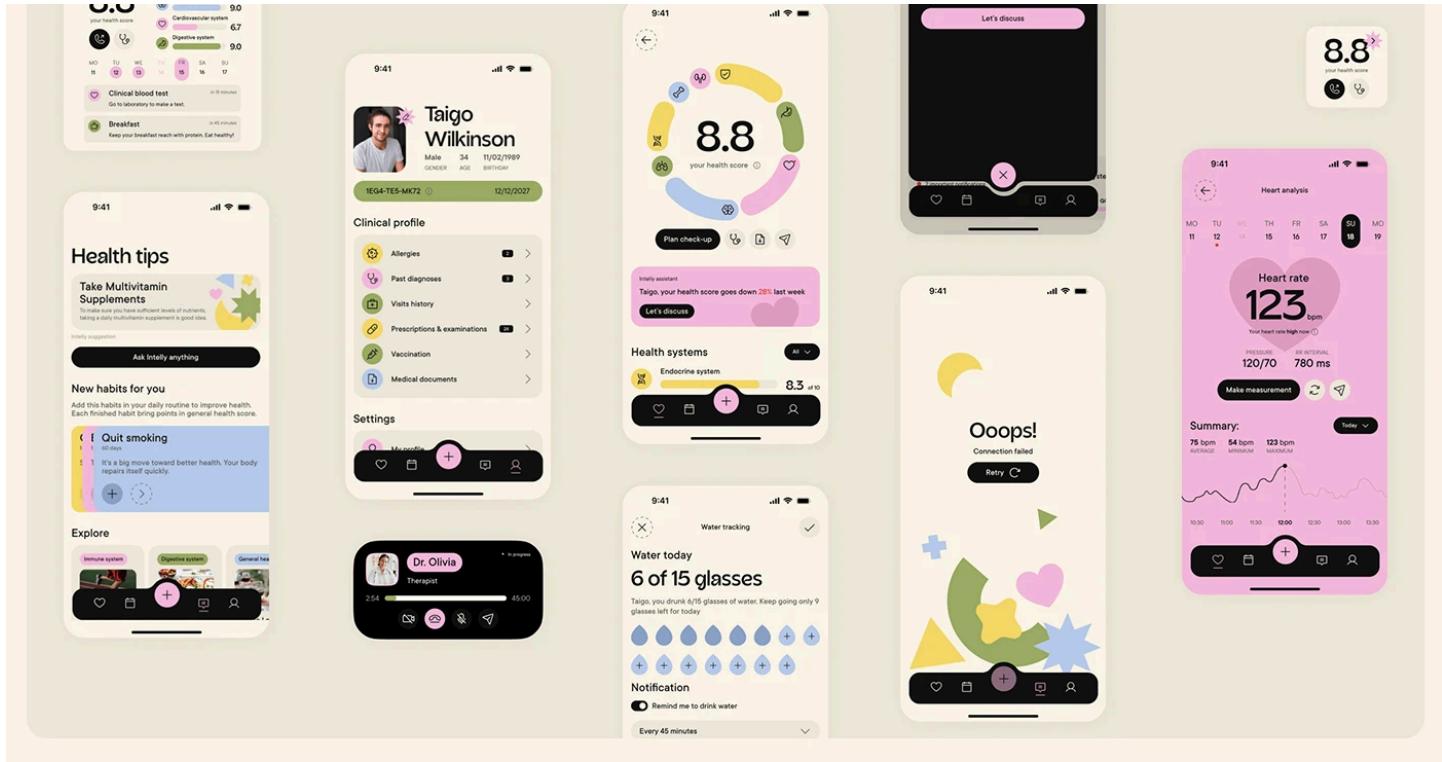

Advanced personal profile.
Personalized health tips

Intelly provides an advanced clinical profile feature, compiling comprehensive patient data: medical history, vital signs, and lifestyle factors. Leveraging this data, personalized health tips are generated, offering tailored recommendations for lifestyle modifications, preventive measures, and treatment adherence. These tips are based on individual health goals, medical conditions, and evidence-based practices, empowering users to make informed decisions about their well-being. With a focus on personalized care, our platform aims to enhance patient engagement and improve health outcomes.

Dynamic dashboard. Advanced patient management

Dashboard features provide doctors with a comprehensive overview of their practice, including key metrics, patient information, and upcoming tasks. Advanced patient management tools offer robust capabilities for organizing and tracking patient data, such as medical histories, treatment plans, and appointments. These features streamline administrative tasks, enhance communication with patients, and facilitate informed decision-making. By centralizing information and streamlining workflows, doctors can optimize their efficiency and deliver personalized care to their patients effectively.
